

LaEvita
Regain your femininity

The laser solution for female disorders

Patient Information

Vaginal rejuvenation with laser

Discover the painless solution for women's health

Every woman, during her life, is subjected to a series of natural events that can alter the normal structure of the vagina and uterus. Normal aging, pregnancies, menopause, hormonal imbalances, changes in body weight can be among the main causes of a series of disorders in women.

biolitec® has the complete solution to the main disorders affecting the female reproductive system.

LaEvita

is a modern laser solution for the treatment of vaginal atrophy and stress urinary incontinence.

How does it work?

Thanks to the special applicator, the laser emits a gentle, almost painless light that stimulates collagen production and restores vaginal elasticity and hydration, and improves vascularization of the vaginal mucosa.

Each session lasts about 10 minutes and is performed without anesthesia.

The treatment includes 3 sessions at 4-week intervals. In more severe cases, 1 additional session may be necessary.

The procedure is performed on an outpatient basis, is virtually painless for the woman, and does not require hospitalization.

And for post-treatment?

At the end of the treatment you can immediately return to your normal activities, without any downtime.

When to use LaEvita?

In cases of:

- Vaginal pain
- Itching and vaginal burning
- Vaginal dryness
- Vaginal laxity
- Urinary discharge

Consult your specialist to assess your condition and to find the best treatment for you.

Anna, 52 years, Italy

Thanks to this innovative laser therapy I am much better and my discomfort has disappeared. This therapy has not only improved my health condition but has also generally improved my quality of life and given me my smile back.

Become young again
